Customer Overview

E-signature solution for smoother business processes

Esignly is a product of **Cyber Infrastructure (P) Limited**. Esignly offers the most complete solution for preparing, signing, sending, and managing documents online.

Project Features

- Single account to login and access documents from any device, at any time and anywhere.
- Send documents in a prompt and secure manner.
- Easy integration with existing technology.
- Conduct real time business activities.
- Focus on providing highest level of security for the documents.

Problem Statement

The operational costs associated with maintaining paper documents are huge. For contracts, legal documents or agreements, conventional paper-bound methods are used that require lot of time, space and money. CIS intended to create a product that solves this problem with efficient e-signatures that are quick to make and share. The aim was to change the signing experience with digital method that is completely secure and safe.

CIS Solution

Esignly caters to individuals, small and businesses and enterprises. User can sign the document virtually with the help of tabs and simple messages guiding through the process. The electronic signature is 100% secured.

The tool provides simple ways to sign, send and manage documents. User can upload any document from their computer, or using any popular document sharing website like drop box and Google drive. The user can place their own signature by easily dragging a signature block to the right location in the document or report. Then the authentication/verification system (user name, password, SMS code, security question & answer, third party verification services) can be selected.

The user needs to mention the names and email addresses of all the expected signatories or recipients of the document along with the order of signing the document and click SEND button. Each signer will receive an email inviting them to e-sign the document. Each e-signer will be instructed through the signing process. Documents or reports can be downloaded once they are signed by the signer. The documents can be saved and stored in E-signly or can also be downloaded by the signer in their own record and deleted from E-signly.

User can check the status of the document anytime, anywhere and set automatic reminders to get notified about every single step of the process. Documents will be accessible at all times, secured on the cloud and can be printed, if needed. Users can get visibility into documents across their organization by managing internal users and adjusting the trail. Advanced options help user attain compliance policies for future time reporting. The tool uses comprehensive measures to ensure the credibility, confidentiality, authenticity and integrity of the documents. The tool can be accessed from any device, anywhere and at any time.

One can check updates about the process, read the document and get real time status through a secured network. The tool brings different operations like signing documents, sharing documents,gathering signatures and sending documents to a wide network, all in one place.

Challenges while Implementation

Converting different formats of documents into images was challenging. Documents in XLS and PNG formats were also converted into JPEG images.Another challenge was plotting the signature on the document at a particular place. Some more challenges were in the form of maintaining the size and quality of the converted document where the size was not to exceed 10MB and the aspect ratio had to be kept in line with the original document with no loss in quality.

Positive Outcome

Integrated Travel Information System

Esignly has enabled business operations to become streamlined, prompt and secure. The product is suitable for use in a variety of industries like finance, insurance, healthcare, government, banking, real estate and legal department.
